

Adrián Moreno Peña

Computer Engineer

Hello!

I am a Spanish computer engineer, and I also have a Master's degree in Project Management. I have a work experience of 8 years, and the last 4 of them I was working in my own development studio, Zadia Software, where I was co-founder and lead developer. I sold my part of the company to come to work at Amsterdam, where I have been for the since early 2015, as a senior mobile apps developer.

My profile is mostly technical, the field that I love and where I feel more comfortable, with a broad business and market vision, partly thanks to having started an developed a company. I am a fast learner, with strong motivation and sense of responsibility with myself, my team and clients, and people likes my positive attitude and easy going attitude.

My day to day tasks have included coordinating the technical matters of my development studio, where I was a co-founder, including defining technical practices, controlling code quality and deploying it. I also managed the requirements from the clients, as well as the budgets and schedules.

In the technical field, my main expertise areas are mobile and web development. In the web are I have created many based sites, mainly PHP based with Drupal and Wordpress, and some with custom code in Symfony or Yii. I have been in charge of both the backend and frontend programming of our websites, defining the code patterns for the backend and the design patterns and trends to be applied on the websites frontend, as well as programming PHP, HTML, CSS, SASS, Javascript, etc. I've also had experience with J2EE development for more than 3 years, in my previous companies, mainly developing custom intranet applications for big corporate clients.

I complement this with knowdlege about other programming enviroments and languages such as Ruby on Rails or C#.

In the mobile field I have extensive experience with both native Android and iOS SDKs and platforms, with many published apps. I have also experience with hybrid frameworks like Phonegap or Titanium Appcelerator, while using Javascript frameworks such as Angular.js and Backbone. I have experience also with Blackberry SDKs.

I hope this information encourages you to talk with me, and hear back from you soon!

Adrián Moreno Peña

Adrián Moreno Peña

Computer Engineer

Work

2015 -

CTO (Chief of the Technology Office) Pocket Media. Amsterdam, Netherlands.

Coordinating the technology team of a mobile advertising agency, as part of the management team, executing mobile and web development projects. Defined the products roadmap, milestones, and plan to achieve the objectives.

Skills: advertisement, product management, product owning, roadmap definition, tech & business alignment
